

- Is there documentation about relevant laws and regulations with respect to the intended use of the data? If yes, were they implemented?
- Is there documentation about relevant standards with respect to the intended use of the data? If yes, were they implemented?
- Were permissions (including ethical, legal, and institutional) obtained to enable dataset creation?
- Is the dataset standardized to ensure compliance with external reporting requirements?
- Are processes integrated for handling personal or sensitive data according to data protection laws (e.g. GDPR)?
- Is the dataset regularly reviewed for compliance with changing regulations?
- Does the manufacturer establish procedures to collect patient data based on well know practices such as Good Clinical Practice (GCP)? (e.g. consent of participants is collected and handled accordingly, etc)
- Does the manufacturer describe the collected data using descriptive statistics?
- If patient data is included, was ensured that patient data is adequately protected (incl. adequate protection of training data or in case of model extraction)?
- Were the datasets de-identified or anonymised so that individuals cannot be identified?
- Did individuals who are represented in this data give consent for using their information developing this use case?
- Were individuals provided with any mechanism to revoke their consent in the future or for specific uses?
- Were any ethical review processes conducted (e.g., by an institutional review board)?
- Does the manufacturer assess the risk arising from imbalanced datasets based on the intended target patient population of the device?
- Does the manufacturer consider risks arising from differences in demographic, anthropometric, anatomical and physiological differences among target patient population when establishing datasets?
- Does the manufacturer establish procedures for data storage and retention according to the applicable regulatory requirements?
